WINTER IS COMING

NEWS OF ICE AND FIRE

THE SMELL OF HOT COCO

AND MUCH MORE

Interested in working for a growing, international company
after your studies?

Analytical Solutions and Products is a company with a clear objective: *to offer practical solutions for analytical issues*, both for the online analysis process as in the laboratory.

ASaP is an international company with customers and suppliers all over the world. Customers apply the products and solutions that ASaP offers worldwide for process control, monitoring of product quality, energy saving and controlling environmental emission standards and permits.

To achieve this, we have a team of highly trained professionals that supports this objective, a team of colleagues, each with their own unique addition to our company.

“Working at ASaP you can put your chemical knowledge to the test. How to perform sensitive measurements for low concentrations of analytes in the harsh environment of industry? In a dynamic environment, a team of technical experts with hands-on experience and theoretical knowledge discuss the challenges on a daily basis trying to solve analytical problems for the process industry. Also in large process plants you will see that Chemistry makes sense!”

Jan-Hein Hooijschuur PhD, PAC-bestuur 2010, ACD voorzitter '07-'08, penningmeester '06-'07

Current periodical

Volume 49 #1

ACiD is the periodical of the Amsterdams Chemisch Dispuut, the study association of Chemistry in Amsterdam. ACiD is home delivered to ACD's members and donators and distributed around the department of Chemistry.

Reactions and submissions are always welcome! Articles can be send to the mail address mentioned above as a Word-document.

From the editor

Lovely readers,

Let me introduce you, a wee tad late, to a new academic year and to the first ACiD of edition 49, which this year will even contain five volumes instead of the four volumes in earlier editions. The editorial office of ACiD is highly motivated and will try to create a different magazine style for every volume.

Inhoudsopgave

- 
- 4** **The Old Chair Says Goodbye**
'A minute, an hour, a month, death is certain, the time is not'
- 5** **The New Chair Says Hello**
*'Valar Morghulis "all men must die"
Valar Dohaeris "all men must serve"'*
- 6** **The Board About the Board**
'There is a lot that can happen between now and never'
- 9** **News of Ice and Fire**
'You know nothing'
- 10** **Chocolate Milk Disected**
'What we don't know is what usually gets us killed'
- 11** **Japanese Curry**
'Food is coming'
- 13** **Get to Know the Freshmen**
'Turn us away and we will burn you first'
- 17** **ABC**
'That's what I do. I drink and I know things'
- 18** **Puzzel**
'Every one of us is poor and powerless, and yet we can overthrow an empire'

In this volume of ACiD you can meet some of our new freshmen, you will get an introduction of the new board and we will try to give you warm feeling with the science behind the aroma of hot chocolate, because after all: Winter is coming. Some ACD'ers even gave us a peek inside their room, where they will keep themselves warm for the winter to come.

Enjoy reading and brace yourselves,

ACiD's Lord Commander Lars Overwater

The Old Chair Says Goodbye

Dear members,

In the last ACiD I wrote that it would be the last time for me to write to you, but surprise! I was asked to write something for the first edition of this year's ACiD. Of course this provides a suitable occasion to look back at the last activities organised by the committees of the previous year.

To start with the end of last year, when the Feestcommissie organised a great barbecue, not only for our members but also for a lot of PhD's, professors and a lot of small chemical companies around the Science Park. Then the ACD plunged into eight weeks of darkness without any activities. This gave the 71st and 72nd board enough time to prepare for the upcoming year. We cleaned and reorganised the whole ACD-room, and taught the new board everything we knew. I must say the result was magnificent.

The summer-holiday went by as fast as a Friday evening drinks, and soon the new Sjaars started appearing in our sights. During the Intreeweek and the Faculty Introduction some of them already made quite a name for themselves. At the Grand Opening drinks, we met a lot of first years that tried to 'catch' all the active members, which was a great success as almost all of them succeeded in performing the given orders in exchange for a Pokémon card.

The following week a very educative symposium "ACD Loves Food" was organised by the LEC, which was followed by the ACD'er of the Year award ceremony, where even the youngest member of our association was given a prestigious award.

We ended our year with an amazing EJW, where the Sjaars were already making new career plans for when their scientific career would fail.

Then the 26th of September, a sound of the ALV-hammer hitting wood signified the end of the 71st board of the ACD. I have to say that the last few moments as your chairman got me a little bit shaking. When pinning up the ACD-pin on the shirt of my successor, all the beautiful moments of the past year flashed through my mind: the fifth place at the ONCS, a wonderful BEC and all the other great activities. But when the new chairwomen reopened the ALV a few minutes later, I knew that the association was in good hands. I wish the 72nd board the best for the upcoming year, seeing how they dealt with the first few days managing our association, I expect nothing but the best.

Then I want to say a last thank you to all the members and donors and of course the board members of the 71st board, as they had to deal with me as their chairman for an entire year. I still do not know how they and the whole association managed to survive.

For now this will really be my last goodbye,

Your old-Praeses, Yol Tio

The New Chair Says Hello

Dear ACD,

Hereby I present to you: my first piece as the new chair(wo)man of this lovely association. After the 'very crowded' Wissel-ALV our year as the new board has finally begun. Hopefully everyone has enjoyed the constitution reception in Café de Gieter as much as we have. From now on we will bring our A-game to provide you with the most interesting lectures and excursions, 'gezelligste' drinks on Friday and bouncing parties. But with only six people we will not succeed, which is why we are very happy with all the active members that are so committed to help us during the coming year. Of course, the CWAL will also make sure that they feel appreciated, as they truly are.

During the 'Intreeweek' we have already had an impression of our new first-year students. They have explored the city and found out about the ACD. The Faculty Introduction had them singing and dancing and I can proudly say that you could find a lot of first years at the Nota Bene that night. They also put their best foot forward at the Meet-the-freshmen-drinks to win the meter of beer. Beer was also no problem for them during the First-Year-Weekend, where we have enjoyed the, sometimes scary, woods of Ellertshaar, the lovely weather and of course the organisational skills of the KOEst. All of this together created a weekend to never forget.

Soon our association will be a year older again, which means that the first party is already coming up. And parties will keep coming up with all the events and activities that are planned for the coming year. Because the Commission Kick-Off and the 'beer-tap' course are just the beginning...

This year is extra special, because it's the first year we are organising a ski trip to France! Unfortunately, I have never been on a ski trip before, but it sure sounds like something you cannot miss out on. The PAC symposium will be in our own lovely city this year, so there is absolutely no reason to miss this day full of interesting lectures about recent research, because you don't even have to risk getting the chills when you leave Amsterdam. Next up is our yearly excursion abroad, better known as the BEC. This year we will travel to Prague, the capital of the Czech Republic, where we will walk along the Moldau, eat ovocne knedliky and pay for our beers with Czech korunas. This golden city is known for its beauty and after a day full of excursions to chemistry related companies, universities and museums, there will also be time to explore the other things that Prague has to offer. Last but definitely not least, we will travel all the way to Utrecht for the biggest sports event in every chemistry student's life: the ONCS. Unfortunately, we haven't won last year in Nijmegen, but ended up on the fifth place. This year we will fight again to let history repeat itself, because the last time that our association has had the honour of winning the ONCS has been in 1993, a year that I can't even say I can remember.

We hope that you are looking forward to this year as much as we are, we will do our best to exceed your expectations and make this year one like never before! Finally, I would like to wish everyone good luck this year and don't forget to have fun!

Greetings,

Your new Chairman, Tula Kaptein

The Board About the Board

On the 26th of September the board of ACD changed members. In this piece the new board members will tell you something about themselves via a little introduction of each other.

Tula Kaptein - Chairman *(by Lars Overwater)*

Oh Kaptein! My Kaptein! Our fearful trip has begun. And I have to say that I am glad it is you at the steering wheel. Not only does Tula have the ability to get everyone hands hoay, she also has a big heart for our lovely association. And if our ship ever gets damaged (again), I truly believe she will do anything in her strength to get us home safe. Even if that means climbing up the mast and holding the sails together personally. And that is a chairman I would travel the seven seas with or my name is not Overwater.

Roy van Sluis - Secretary *(by Tula Kaptein)*

None other than Roy, the oldest and maybe wisest member of our board, is our secretary this year. Even though he accidentally sent the boards 'to do's' to our sister-association in Utrecht, he makes sure that the Facebook page is up to date and that the weekly mail gets sent on time. On top of that he is also really busy organising fun activities and excursions for our master students. Roy loves to, occasionally, drink a beer in his home town Alkmaar and likes to make endless playlists for the drinks in the Brainwave. Fun fact: Roy is the only one of our board who has been on a ski trip before.

Michael Doppert - Treasurer *(by Roy van Sluis)*

Ever since Michael has joined the ACD, he has become a crucial member. One of his most important contributions to the ACD are his famous memes, which you can find on Amsteldams Cemisch Dospuut. During exam weeks he is very productive in the creation of his memes and knows how to cheer everyone up in this sad and stressful week. Besides being known for his Nunchaku, cooking and dance skills (is there anything he cannot do?), he is also very well known as the man of the teamschotels. With this fried masterpiece from the Oerknal he can fill everyone's belly, but especially his own Barbara. He needs to pay attention to the bank accounts though, so sadly the teamschotels may not be as abundant as he would have liked this year. Thankfully, Uncle Duo will always be there for him to sponsor his (un)foreseen costs.

Maartje van Rijn - Commissioner of Education *(by Michael Doppert)*

What needs to be said about Maartje? An amazingly fun, hard-working and sometimes unobservant girl. If you ever need someone to party with, she's always available. She might fall asleep halfway through, but you'll have fun nonetheless. Despite that, I have never seen someone work as hard as Maartje does to make sure everyone gets their books (sort of) on time. And have I told you about how much fun she is? Sorry, I think I just pulled a Maartje. This year she will be the one to sort out all your education troubles. You need a book for a class? She's your girl. You want to complain about your teacher? She'll listen. You want to build a shrine to Clayden? That's...unusual, but you should probably talk to Maartje. My point is, she'll help you with everything she can and I'm confident she'll do great this year!

Demi Snabilié - Commissioner of External Affairs *(by Maartje van Rijn)*

With her beautiful curls and cheerful personality, Demi is this year's Commissioner of External Affairs. She is a very important addition to our board. Not only will she organize amazing excursions and interesting lectures, she will also organize the foreign excursion. Although it has become a habit within our board to say that when you leave the Friday drinks or a party earlier than most people you are 'pulling a Demi', Demi is always up for pre-drinks at Chupitos. A night out with Demi is always a blast, as is just hanging out with her. There are no songs Demi won't dance to (expect maybe when Klaas is DJ) and no shots Demi won't take with you. But of course, she is also a very hardworking and genuine person. Demi is a great friend and the perfect Commissioner of External Affairs.

Lars Overwater - Commissioner of Activities & Bar *(by Demi Snabilié)*

Just when you thought that there wouldn't be a perfect successor for 'Anna Borrels', there was Lars. This happy red-headed guy holds the name Commissioner of Activities and Bar high (just as his alcohol tolerance). When you see Lars with a grumpy face, please take a picture, because that doesn't happen often. As a matter of fact, I have never seen Lars without a smile. This smile combined with his "down-to-earth" personality, which he grew up with in Friesland, makes him great company at parties, nights out and of course at the Friday drinks. It also makes him a great catch for the Board, because we all need a little sunshine during our meetings and serious businesses. If you are wondering what Lars is doing outside of ACD just take a look at which small concerts are coming up, because great chance you can spot him there. Oh, and if you still can't find him, you can always check at any service desk and you will probably find him there.

News of Ice and Fire

Heated gloves

Skiers, crossing guards and 'kou-kleumen', who always have cold fingers, will love the new paper in Applied Materials & Interfaces. A group of scientists from Massachusetts developed a nano-coated material that can be sown, weaved and, most importantly, electrically heated. Only a small current, provided by a battery of 1,8 grams, is needed to heat your fingers to the same temperature as your palm.

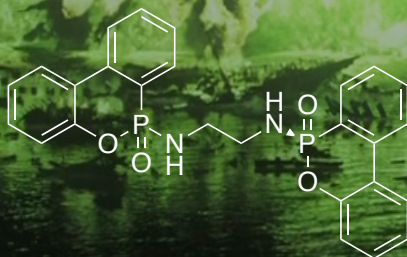

The current is not big enough to pass through your skin or hurt you. The coating consists of the polymer poly(3,4-ethylenedioxythiophene), also known as PEDOT.

And, to make it even more magical, the fabric can be sown together with normal thread when ripped. Now all we have to do is wait for it to be commercialised, so we never have to suffer from cold fingers again!

Non-toxic flame retardants

This news fact is for people who love to light some candles when it gets cold. Chemists from Empa have developed an environmentally friendly flame retardant. We need this flame retardant because the PU (polyurethane) used in house façades, fridges, car seats, living room sofas and shoe soles, is highly flammable.

Before, foam manufacturers used toxic chlorinated phosphates as flame retardant. The new flame retardant EDA-DOPO, a derivative of the familiar flame retardant DOPO (9,10-dihydro-10-oxa-phosphaphenanthreneoxide) is not toxic and doesn't emit toxins when burned. The EDA-DOPO is currently still tested and the manufacturers are waiting for the needed certificate. The EDA-DOPO meets a lot of the requirements for flame retardants. It has the highest flame retardant classification, it is highly compatible with polyol, the base materials of PU foam and the flame retardant will distribute itself finely in all PU's pores.

EDA DOPO

Every **IDEA**

Meet Tania

After completing a Masters in Chemistry and Process Engineering she joined the formulation lab at AkzoNobel Aerospace & Coatings in 2011. She has worked mainly on exterior topcoats for airplanes. "It's very important to the customer because these exterior coatings represent the image of the airline", says Tania. "You need to be flexible, quick and sharp. Every idea takes the project forward and you're proud to see the product applied on a shiny airplane."

Tania loves the atmosphere at AkzoNobel: "I feel quite at home and I'd like to grow towards a position with more responsibility. AkzoNobel is seriously investing in my development and you are free to take all manner of training programs."

Chocolate Milk Disected: A Hot Cup of Chemicals

This year we've already past the vernal equinox and we're well on our way towards the winter solstice, meaning the days are shorter, the clothes warmer and the drinks hotter. Among those hot drinks there is one undisputed champion: hot chocolate. Part of enjoying the chocolate drink is getting lost in its lovely dark aroma, but what does this aroma consist of, and of what use would the aroma-active compounds be, if we were to unleash the mad scientist inside ourselves and extract them?

The elephant in the room is vanillin. This compound is present in a relatively high concentration and is a large contributor to the aroma, giving it a sweet, pleasant and, well, vanilla-like smell. So, what use does vanillin have aside from its taste and smell? Well, as it turns out vanillin makes for great and easy to make universal TLC stain, used to highlight those pesky compounds that won't light up under UV.

Hot chocolate doesn't have as light a smell as vanilla though, and the malty dark chocolate-like smell is largely supplied by the molecule 3-methylbutanal. 3-Methylbutanal is used to make pinacolone, a ketone with a peppermint-like smell, which in turn is used to make the herbicide metribuzin.

Aside from boasting a vanilla-like and malty smell, hot chocolate also carries a nice warm caramel-like smell. This fragrance is caused by maltol, which is found in roasted malt, hence the name. Under specific circumstances maltol has the ability to make the polypeptide nisin act as an effective antibiotic for E.coli.

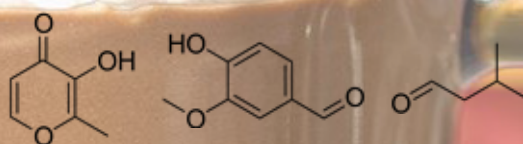

Figure 1: f.l.t.r. Maltol, Vanillin and 3-methylbutanal

Although the compounds mentioned above are present in barely relevant amounts it's still a fun idea to consider that you could be treating someone's E.coli infection while running a stained TLC of the herbicide you just synthesised, with the compounds in the cup of hot cocoa you just poured.

So next time you pour a hot cup of coco, remember you could also be treating someone's E.coli infection while running a stained TLC of your freshly made herbicide.

Maarten van Dorp

Japanese Curry

For 4 persons

Onion

1 apple

2 sweet potatoes

1 package of Japanese curry paste (You can buy this at the Toko in 3 types of spiciness. Hot mild and none. Remember, this is 'Japanese spicy' so it is not comparable to Indian curry)

Rice

100 grams frozen Edamame or peas

200 grams chicken thighs

1.5 cups of water

2 carrots

a tumb of ginger

vegetable oil

gerlic

honey

soy sauce

fish sauce

2 eggs

salt and pepper

Mise en place

Chop the apple, sweet potatoes, carrots, garlic and onions in small parts of about 1 by 1 centimeter. The chicken should be chopped in bigger parts.

Let's start cooking

Firstly, bake the onions and carrots for 5 minutes in a large pan until the onion becomes translucent in the vegetable oil. Bake the chicken with the onions and carrots together with the garlic and ginger until the chicken is baked properly. Add the water, curry paste, Apple and the sweet potato and boil the mixture for 20 minutes until the potato is cooked properly. Japanese curry should have a high viscosity comparable to a soup. This is what you aim for and therefore you might have to add more water. Start boiling the rice when the potatoes are in the pan for 5 minutes. When the potato is almost cooked properly add the edamame for some more veggies and cook them about 2 minutes. Finally, for further seasoning you can add honey, soy sauce, fish sauce or salt and pepper.

Get to Know the Freshmen

Michelle

Wat is je leukste intreeweek ervaring?

Mijn leukste intreeweek ervaring is wel het Plank-Gas feest. De locatie was hartstikke gaaf en de muziek was voor techno ook erg leuk!

Hoe ga jij deze winter overleven?

Ik ga deze winter overleven met veel dikke truien, mokken thee en koffie en natuurlijk met veel warme (pure) chocolademelk met slagroom. :-)

Welke scheikundige stoffen zou jij graag eens bij elkaar gooien uit nieuwsgierigheid?

Ik weet dat het zeer onverstandig en gevaarlijk is, maar ik zou eigenlijk wel een keer graag willen zien wat voor explosie je krijgt als je aceton en waterstofperoxide bij elkaar gooit.

Wat verwacht je volgend jaar geleerd te hebben?

Ik hoop dat ik dit jaar genoeg leer om de rest van de bachelor jaren goed mee te kunnen komen.

Wat vond je het spannendste aan het beginnen met een nieuwe studie?

Het spannendste vond ik toch wel dat je niet voor 100% wist of de studie echt bij je paste.

Maurits

Wat is je leukste intreeweek ervaring?

Uitbrakken in Artis bij Gapen met de Apen.

Hoe ga jij deze winter overleven?

Global warming.

Welke scheikundige stoffen zou jij graag eens bij elkaar gooien uit nieuwsgierigheid?

Diwaterstof peroxide en aceton.

Wat verwacht je volgend jaar geleerd te hebben?

Ik verwacht volgend jaar het periodiek systeem uit mijn hoofd te kennen.

Wat vond je het spannendste aan het beginnen met een nieuwe studie?

Of het niet allemaal te moeilijk was en ik er niets van zou snappen.

Heb je een leuke quote van de afgelopen studieweken?

"Is deze thermometer warm?"

Gelukkig vind ik het tot nu toe hartstikke leuk! Daarnaast vond ik het nogal spannend om naar een nieuwe stad met allerlei onbekende mensen te gaan. Ik kom zelf uit de omgeving Utrecht en kende bijna niemand hier. Iedereen was echter heel open en vriendelijk hier en ik voelde me al snel thuis :-).

Wat is je favoriete drankje en waarom zou de rest van het ACD dit moeten drinken?

Qua alcohol raad ik echt een Mojito (cocktail) aan. De combinatie munt en limoensap is echt heerlijk. En tja wat is beter dan een alcoholisch drankje waarmee je geen nasmaak krijgt van de alcohol?

Welk eerstejaarsvak kijk je het meest naar uit?

Ik keek eigenlijk al naar het eerste vak erg uit, omdat ik quantum chemie erg interessant vind en daar graag meer over wilde weten.

Je bent nu actief bij de feestcommissie van het ACD. Waarom wilde jij actief worden bij het ACD en waarom deze commissie?

Ik wilde graag actief worden om zo meer mensen te leren kennen buiten mijn eigen jaarlaag. Daarnaast leek het me gewoon hartstikke gezellig en leerzaam! Ik ben bij de feestcommissie gegaan, omdat het mij hartstikke leuk leek om eens een keer een echt groot feest te organiseren met een thema, goede muziek, leuke versieringen etc.

Wat is je favoriete drankje en waarom zou de rest van het ACD dit moeten drinken?

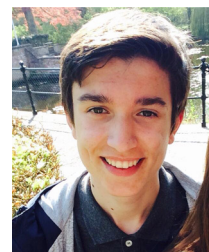

Pils, iedereen moet gewoon paar neem'n.

Welk eerstejaarsvak kijk je het meest naar uit?

Practicum

Je bent nu actief bij de feestcommissie van het ACD. Waarom wilde jij actief worden bij het ACD en waarom deze commissie?

Ik wilde actief worden voor een Pokémon kaart bij de Eerstejaarsborrel en voor een grotere kans om praeses te worden. Ik wilde bij de feestcommissie omdat ik denk dat feesten organiseren wel in mijn straatje past.

Get to Know the Freshmen

Sam

Wat is je leukste intree-week ervaring?

Plankgas.

Hoe ga jij deze winter overleven?

Jägerbombs.

Welke scheikundige stoffen zou jij graag eens bij elkaar gooien uit nieuwsgierigheid?

Aceton en waterstofperoxide.

Wat verwacht je volgend jaar geleerd te hebben?

Waarom ik geen aceton en waterstofperoxide bij elkaar moet gooien.

Wat vond je het spannendste aan het beginnen met een nieuwe studie?

Dat ik er niks van zou begrijpen.

Heb je een leuke quote van de afgelopen studieweken?

'4 bier backflip' – Jens Tolboom & Unibrau

Nadav

Wat is je leukste intree-week ervaring?

Plankgas

Hoe ga jij deze winter overleven?

Warme chocolademelk.

Welke scheikundige stoffen zou jij graag eens bij elkaar gooien uit nieuwsgierigheid?

H₂O₂ en aceton.

Wat verwacht je volgend jaar geleerd te hebben?

Hoe je een goed adtje gestrekt doet.

Heb je een leuke quote van de afgelopen studieweken?

'Lekkah boeih.'

Wat is je favoriete drankje en waarom zou de rest van het ACD dit moeten drinken?

Water, want ik probeer jullie te vergifigen.

Welk eerstejaarsvak keek je het meest naar uit?

De vrijdagmiddagborrel.

Je bent nu actief bij de BEC van het ACD. Waarom wilde jij actief worden bij het ACD en waarom deze commissie?

Zodat ik kan zeggen dat mensen hun BEC moeten houden.

Wat is je favoriete drankje en waarom zou de rest van het ACD dit moeten drinken?

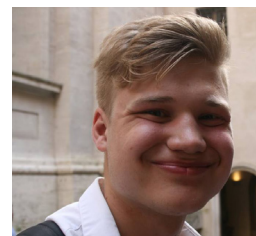

PILS, want pils.

Welk eerstejaarsvak keek je het meest naar uit?

Practicum.

Je bent nu actief bij de ABC van het ACD. Waarom wilde jij actief worden bij het ACD en waarom deze commissie?

Het leek me gewoon heel tof om een actief lid te zijn, en toen ben ik eigenlijk zo de ABC in gerold. Het leek me van tevoren ook wel een leuke commissie, en nu merk ik zeker dat deze commissie mijn ding is. Verder ben ik trots op mijn titel; Blikjesbitch.

Rianne

Wat is je leukste intree-week ervaring?

Plankgas en eindfeest waren echt superleuk. Ik heb ook heel hard gelachen toen Brecht zich kapot schrok van een vis in Artis.

Welke scheikundige stoffen zou jij graag eens bij elkaar gooien uit nieuwsgierigheid?

Aceton en peroxide.

Wat vond je het spannendste aan het beginnen met een nieuwe studie?

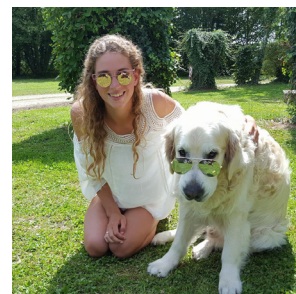

Ik denk dat ik wel bang was dat het te moeilijk zou zijn. Maar het is niet zo iets van dit kan ik niet.

Welk eerstejaarsvak keek je het meest naar uit?

Organische en structuuropheldering, dat vond ik op de middelbare school ook wel leuk.

Je bent nu actief bij de KoCo van het ACD. Waarom wilde jij actief worden bij het ACD en waarom deze commissie?

Ik houd van eten en ik kende alledrie de leden al. Het leek mij gewoon leuk om erbij te gaan. Michael, Willemien en Rens zijn gewoon heel aardig.

ABC: Winterbier is Coming

(Wo)Men of the Night's Watch!,

Het nieuwe jaar is inmiddels al ruimschoots ingeleid. De sjaars zijn al bijna gewend aan het leven in 'the wilderness north of the spoorlijn', die men 'Science Park' noemt. Ouderejaars zijn af en toe nog aan het bibberen vanwege eerdere reisjes naar tropische oorden. "Winter is coming," dat is zeker. De despo'tjes zullen vervangen worden voor een wat minder tropisch drankje en de tijd van urenlang in het zonnige grasveld liggen met een biertje is weer bijna voorbij. Ook ik moet het op dit moment doen met een koude windvlaag en een donkere nacht op station Eindhoven.

Maar niet getreurd! Zoals gewoonlijk zorgen wij als ABC ervoor dat jullie van warmte, gezelligheid en heel veel lekkere drankjes kunnen genieten! We hebben al redelijk ons best gedaan met een aantal ouderwetse potjes funkyball en een overheerlijke BBQ.

Ook de borrels in de splinternieuwe brainwave komen weer helemaal tot leven! Tijdens de Grand Opening konden de nieuwe sjaars Pokémon kaartjes verzamelen waar een meter bier tegenover stond! Ook de ACD'er van het jaar prijs is weer uitgereikt en wel aan de enige echte Rens van Roosmalen! Oh nee wacht, toch niet! Die jongen die nu de nieuwe penningmeester is, hoe heet hij ook al weer... Michiel Huisman? Ik bedoel natuurlijk

onze eigen Michael! Het nieuwe bestuur is aangetreden en als vereniging hebben we tijdens onze borrel het oude bestuur van harte bedrankt met 'Fire and Blood' (al zeggen ze zelf met hoofdpijn en schrammen).

Er staan nog een heleboel meer activiteiten op het programma en het jaar is nog lang. Er is dus nog veel gezelligheid in het verschiet! In de afgelopen week stond de beruchte Red Oktober borrel op het programma, ikzelf had er niet super veel zin in, aangezien ik verantwoordelijk was voor jullie wildlings. Aan het eind van de tentamenweek werd er samen met de NSA geborreld en stond de Brainwave vol Peter Dinklages, terwijl de La Chouffe bijna onafgebroken uit de tap stroomde!

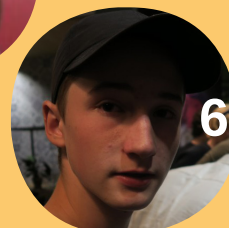

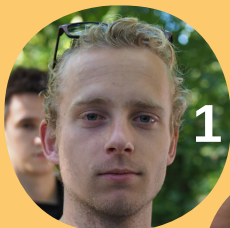

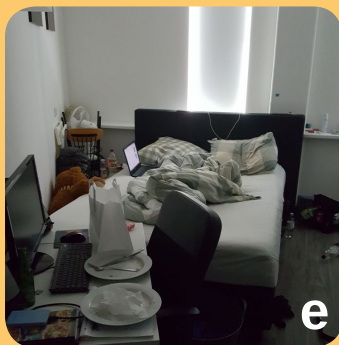

Tenslotte wil ik afsluiten met een kleine financiële tip! Met ingang van 26 september is tappersbier gratis! Dit houdt in dat je gratis bier mag drinken tijdens een tapdienst! Je kunt je gewoon inschrijven in het hok. Mocht je niet kunnen tappen, zijn er natuurlijk altijd ABC'ers bereid het je te leren. Let wel op, als je niet aan het tappen bent moet je wel gewoon betalen. Dit kan natuurlijk door middel van ons fantastische pofsysteem! Houd wel één oud gezegde in je achterhoofd: "An ACD'er always pays his debts!"

The ABC'ers send their regards!

Rens Ham

Puzzel: Home Sweet Home

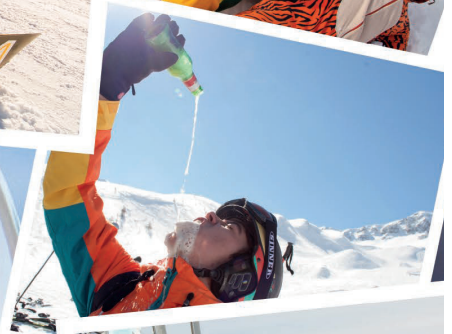

Speciaal voor deze editie van ACiD hebben een aantal van onze lieve leden een foto gemaakt van hun kamer. Aan jullie nu de taak om de juiste kamer bij de juiste ACDer te koppelen. Stuur je antwoord op naar acdblاد@gmail.com en maak kans op een mooie goodiebag van greiner bio-one.
